

EOS CaseHardeningSteel 20MnCr5
Material Data Sheet

# EOS CaseHardeningSteel 20MnCr5

Case hardening steel with good hardenability reaching good wear resistance due to high surface hardness after heat treatment.

#### Main Characteristics:

- → Good wear resistance
- Excellent surface hardness after carburizing
- Material according to EN-10084 alloy number 1.7147
- Carburizable to achieve surface hardness of 60 HRC

#### Typical Applications:

- Automotive and general engineering applications
- → Gears, mechanical part

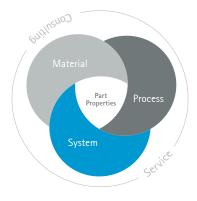

#### The EOS Quality Triangle

EOS uses an approach that is unique in the AM industry, taking each of the three central technical elements of the production process into account: the system, the material and the process. The data resulting from each combination is assigned a Technology Readiness Level (TRL) which makes the expected performance and production capability of the solution transparent.

EOS incorporates these TRLs into the following two categories:

- Premium products (TRL 7-9): offer highly validated data, proven capability and reproducible part properties.
- Core products (TRL 3 and 5): enable early customer access to newest technology still under development and are therefore less mature with less data.

All of the data stated in this material data sheet is produced according to EOS Quality Management System and international standards.

# Powder Properties

EOS CaseHardeningSteel 20MnCr5 powder material is in accordance with EN-10084 alloy number 1.7147.

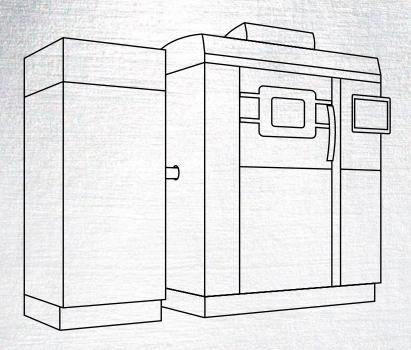

## Powder chemical composition (wt.-%)

Element	Min.	Max.		
Fe	Bal	Balance		
Mn	1.10	1.40		
Cr	1.00	1.30		
С	0.17	0.22		
Si	-	0.40		
S	-	0.035		

Powder	particle	size
--------	----------	------

Generic particle size distribution	15-55 μm

# **Process Information**

System set-up	EOS M 290		
EOS ParameterSet	20MnCr5_040_CoreM291 1.X		
EOSPAR name	20MnCr5_040_CoreM291_100.eospar		
Software requirements	EOSPRINT 2.7 or newer EOSYSTEM 2.11 or newer		
Powder part no.	9030-0004		
Recoater blade	EOS ceramic blade		
Nozzle	EOS grid nozzle		
Inert gas	Nitrogen		
Sieve	75 μm		
Additional information			
Layer thickness	40 μm		
Volume rate	3.84 mm³/s		

# Chemical and Physical Properties of Parts

Micrograph of polished surface

Defects	Result	
Porosity	< 0.5 %	

# Typical part properties

	Yield strength R <sub>p0.2</sub> [MPa]	Tensile strength	Elongation at break A [%]
Heat treated horizontal	1 265	1 480	9
Heat treated vertical	1 265	1 480	9

# **Heat Treatment**

## Hardening:

840 - 870 °C, hold time 30 min when thoroughly heated, water or oil quenching

## Tempering:

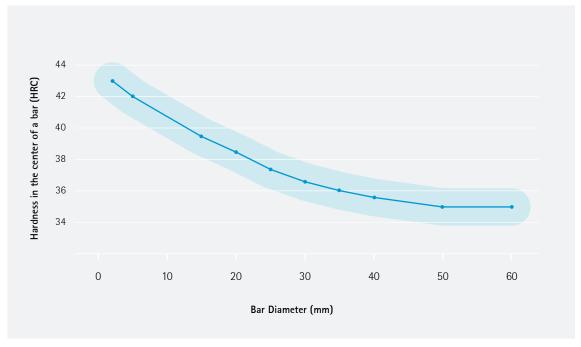

160 - 200 °C, hold time 2 h when thoroughly heated, air cooling

# **Optional softening treatment:**

Normalizing 870 °C, hold time 1 h when thoroughly heated, air cooling

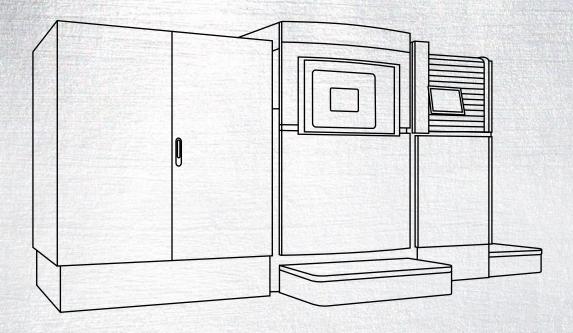

# **Additional Data**

#### Status 10/2020

EOS is certified according to ISO 9001. EOS®, DMLS®, EOSPRINT® and EOSTATE® are registered trademarks of EOS GmbH in some countries. For more information visit www.eos.info/trademarks.

Cover: This image shows a possible application.

The quoted values refer to the use of this material with above specified type of EOS DMLS system, EOSYSTEM and EOSPRINT software version, parameter set and operation in compliance with parameter sheet and operating instructions. Part properties are measured with specified measurement methods using defined test geometries and procedures. Further details of the test procedures used by EOS are available on request. Any deviation from these standard settings may affect the measured properties. The data correspond to EOS knowledge and experience at the time of publication and they are subject to change without notice as part of EOS' continuous development and improvement processes. EOS does not warrant any properties or fitness for a specific purpose, unless explicitly agreed upon. This also applies regarding any rights of protection as well as laws and regulations.
